This invention describes a novel preparation of plant lipoxygenase (I) with altered position specificity which comprises replacing at least 1 amono acid in the wild type lipoxygenase amino acid sequence. The method also describes (I) (I) prepared by the method above; (2) nucleic acid comprising the vector of (3); (5) a plant or plant part comprising a best oell as in (4); (6) preparation of 6., 9-and/or 6,9-hydroperoxy-gamma-linolenic acid comprising reacting gamma-linolenic acid derivative comprising a hydroxy group at position 6 for a hydroperoxy group or a hydroxy group or a Preparation of plant lipoxygenase with altered position specificity comprises replacing at least one amino acid in the wild type lipoxygenase LOX; lipoxygenase; cucumber; plant; 6-hydroperoxy-gamma-linolenic acid; 9-hydroperoxy-gamma-linolenic acid; gamma-linolenic acid; (IPBP-) IPB INST PFLANZENBIOCHEMIE. activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the speciment of presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             86 ENAYEKYGPVFSFIMVGKIFIYLLGSDAAALLFNSKNEDLNAEEVYGRLTTPVFGKGVAY 145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |: | : : |:| : 202

Costigan M;

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

Claim 1; Page; 1017pp; English.

The invention discloses a composition comprising two or more isolated rate or human polymuclectides or a polymuclectide which represents a fragment, cartavity or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymuclectide, a host cell comprising the vector, a method for identifying a muclectide sequence which is differentially regulated in an animal subjected to pain and a chit in creases or decreases the expression of the polymuclectide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymuclectide sequence which is differentially compound for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the cutvity in an animal of one or more of the polymetical composition, a crivity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the cativity in an animal of one or more of the polypeptides or their antibodies. The polymuclectide or the compound that complained in animal a pharmaceutical composition comprising the one or more of the cyclication, a method for identifying a compound useful in treating complaines its activity is useful for preparing a medicament for treating condulates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a minal (e.g. gene the sequence presented is a rat protein (shown in Table 2 of the specification) but was obtained in electronic form directly from WIPO at the sequence date for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the sequence processed when the sequence control or the compound or specification or the

```

The invention discloses a composition comprising two or more isolated rat or human polymucleotides or a polymucleotide which represents a fragment, or human polymucleotides or a polymucleotide and sequence. Also claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence of which is differentially regulated in an animal subjected to pain and a strict that increases or decreases the expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is, differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition computed that regulates the activity of one or more of the regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more of the compound that regulates its activity is useful for preparing a medicament for treating pain and espacetal nerve injury (SNI) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene there is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:

The invention discloses a composition comprising two or more isolated rat or human polymuclectides or a polymuclectide which represents a fragment, derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polymuclectide, a host cell comprising the vector, a method for identifying a muclectide sequence which is differentially regulated in an animal subjected to pain and a gent that increases or decreases the expression of the polymuclectide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymuclectide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating compound that expressed none or more of the polypeptides given in the specification, a method for identifying a compound useful in treating computates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a medicament for treating computates its activity is useful for preparing a medicament for treating computates its activity is useful for preparing a medicament for treating computation, which is differentially expressed during pain. Note: the specification, but was obtained in electronic form directly from wipo intropub/published_pot_cequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           145

                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, cerivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a chart increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a ceptod for identifying a compound or small molecule that regulates the specification, a method for identifying a compound useful in treating continuates its activity is useful for preparing a medicament for treating collisions in the collynucleotides or the compound that compound that complying a composition comprising the one or more condulates its activity is useful for preparing a medicament for treating collisions. The sequence presented is a rat protein (shown in Table 2 of the specification) but was obtained in electronic form directly from WIPO at the wipo.int/pub/published_pot_sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 701, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
THILE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                          APPLICANT: Schardl, Christopher L.
APPLICANT: Schardl, Christopher L.
APPLICANT: Schardl, Christopher L.
APPLICANT: Wang, Jinghong
TITLE OF INVENTION: Endophyte Ergot Alkaloid Synthetic Compounds,
TITLE OF INVENTION: Which Encode Therefor and Related Methods
FILE REFERENCE: P-1060
CURRENT APPLICATION NUMBER: US/09/518,657
CURRENT FILING DATE: 2000-03-03
EARLIER APPLICATION NUMBER: 60/125,490
RAKLIER FILING DATE: 1999-03-22
NUMBER OF SEQ ID NOS: 6
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 4.

A; Description: catalyzes the removal of the 14-methyl group of 14-methylsterols
C; Superfamily; human cytochrome P450 CYP51; cytochrome P450 homology
C; Stywords: chromoprotein; heme; iron; liver; metalloprotein; monooxygenase; oxidoreduct.
F; 308-471/Domain: cytochrome P450 homology <P45>
F; 449/Binding site; heme iron (Cys) (axial ligand) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Molecule type: mRNA

Submitted (OCT-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Helicase that acts as a transcriptional co-activator for peroxisone proliferator activated receptor alpha (PPAR-alpha).
-!- SUBUNIT: Interacts with PPARA, ESR1, THRB and RXRA. It is probably part of the peroxisome proliferator activated receptor alpha interacting complex (PRIC).
-!- SUBCELLULAR LOCATION: Nuclear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE OF 2204-2649 FROM N.A.

FUNCTION: IRBP shuttles 11-cis and all trans retinoids between the retinol isomerase in the pigment epithelium and the visual pigments in the piotoreceptor cells of the retina.
SUBCELLULAR LOCATION: Interphotoreceptor matrix that permeates the space between the retina and the contiguous layer of pigment epithelium cells.
TISSUE SPECIFICITY: Expressed in the photosensitive tissues;

"The genome sequence of Chlamydia pneumoniae TW183 and comparison with other Chlamydia strains based on whole genome sequence analysis."; Submitted (MAY-2002) to the EMBL/GenBank/DDBJ datebases.
-!-CATALYTIC ACTIVITY: ATP + L-histidine + tRNA(His) = AMP + diphosphate + L-histidyl-tRNA(His).
-!- SUBCMIT: Homodimer (By similarity).
-!- SUBCELLULAR LOCATION: Cyroplasmic.
-!- SUMILARITY: Belongs to class-II aminoacyl-tRNA synthetsse family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25 SNXDHTKWWYSTAPMFATWMAGAG-YDVHAQYKFLCI-----HREVIIPALGPYPEKG

SIMILARITY: TO THE C.XLUTYUERI NADD-DEPRNDENT SUCCINATE
SEMILADEHYDE DEHYDROGENASE (SUCOD) (IN THE N-TERMINAL SECTION).
SIMILARITY: In the C-terminal section; belongs to the iron-
containing alcohol dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CATALYTIC ACTIVITY: Acetaldehyde + CoA + NAD(+) = acetyl-CoA +

Nature 397:176-180 (1999).
-!- FUNCTION: Chaperone subunit of a proteasome-like degradation complex (By similarity).
-!- SUBUNIT: A double ring-shaped homohexamer of hslv is capped on each side by a ring-shaped hslv homohexamer (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the clpX chaperone family. Hslv subfamily.
                                                                                                                                                                                                                       154 VSEBEARTLIDRDIEIPVFKTONKLAADLEPS-GDIVLKTYIYPRIKSIATGTPKERLMF

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
